

ServiceNow ITSM 1st Line Ticket Handling

Target Role: 1st Line Service Desk Analyst | Platform: ServiceNow ITSM
Focus: Incident Triage, Priority Matrix, Escalation, Parent-Child & Service Catalog

Executive Summary

This document serves as proof of practical hands-on capability in ServiceNow Incident Management and Request Fulfillment. Rather than relying on theoretical knowledge, this lab workbook demonstrates my ability to log, prioritize, troubleshoot, and resolve IT support tickets following standard ITIL workflows.

Key skills demonstrated include handling password resets on first contact, triaging hardware faults with clear diagnostic work notes for 2nd Line escalation, managing major outages using Parent-Child ticket linking, and correctly separating technical Incidents from standard Service Catalog Requests.

Lab Setup & Navigation

1. Logged into my ServiceNow Personal Developer Instance (PDI).
2. In the top navigation bar, clicked All to open the Filter Navigator.

Figure 1: Navigate to Incident for new incident creation

Lab 1: First Contact Resolution (Password & Access Issue)

Objective: Log, diagnose, and resolve a high-volume 1st Line ticket on first contact (FCR).

Step-by-Step Actions:

- In the Filter Navigator, typed Incident and clicked Create New.
- Filled out Form Header: Caller: John Adams | Category: Software | Subcategory: Email
- Entered Details: Short Description: User unable to log into Outlook post-password reset
- Set Priority Matrix: Impact: 3 - Low | Urgency: 3 - Low (Calculates to Priority 4/5 Low)
- Set Assigned group as Service Desk
- Navigated to Resolution Information tab: Solution Provided
- Resolution Notes: Contacted user via phone. Verified identity. Refreshed user account profile via Active Directory. Confirmed caller successfully logged into Outlook.
- Changed State to Resolved and clicked Update.

Lab 2: Ticket Triage, Diagnostic Notes, & 2nd Line Escalation

Objective: Triage a hardware fault, write clear diagnostic Work Notes, and reassign ownership to Desktop Support.

Step-by-Step Actions:

- Navigated to Incident > Create New.
- Filled out Form: Caller: Fred Luddy | Category: Hardware | Subcategory: Monitor | Channel: Phone
- Set Impact: 2 - Medium | Urgency: 2 - Medium (Auto-calculates Priority to 3 - Moderate)
- Wrote short note: Dual monitor setup flicker and black screen on workstation.
- Wrote the action on Work Note: Contacted user. Swapped display cables with known working spare and updated graphics drivers remotely. Issue persists on physical DisplayPort slot 2. Escalating to Desktop Support for physical hardware inspection.
- Reassigned Ticket: Changed Assignment Group to Hardware Support.
- Set State to In Progress and clicked on Submit.

Lab 3: Major Incident Handling (Parent-Child Linkage)

Objective: Manage a major outage by creating a Parent Incident and linking Child tickets under Related Records.

Step 1: Created Master (Parent) Incident

- Created New Incident: Caller: System Administrator | Category: Network | Subcategory: VPN
- Short Description: VPN Gateway Down - Regional Authentication Outage

- Impact: 1 - High | Urgency: 1 - High (Priority 1 - Critical)
- Added Work Note: Major outage detected. VPN authentication failing across Region A. Escalated to Network Infrastructure. Master ticket created—linking all incoming user calls.
- Save the form and copy the Incident Number (e.g., INC00100013).

Step 2: Created & Linked Child Incident

- Opened a new Incident form for an incoming caller reporting the same VPN issue.
- Caller: Beth Anglin | Short Description: VPN down, multiple systems and service users are impacted.
- Scrolled down to the bottom tabs and clicked on Related Records.
- In the Parent Incident field, searched for the Parent Incident Number (INC00100013).
- Clicked Submit or Save.

Lab 4: Incident vs. Service Request Management

Objective: Differentiate between broken items (Incidents) and standard requests (Service Catalog) and log Business Justifications.

Step-by-Step Actions:

- Triage Checked: User submits ticket asking for new equipment. So, I Identified this as a Request, not an Incident.
- Navigated to Self-Service > Service Catalog > Hardware.
- Selected Peripherals.
- In the Business Justification field, entered - Required for daily tasks. Existing one is faulty and out of warranty, impacting regular tasks.
- Clicked Order Now.
- Returned to original Incident ticket -> Set Resolution Code to Solution Provided.
- Resolution Notes: Item is a standard fulfillment request. Guided caller to Service Catalog and placed Request on Daniel Zill's behalf. Closing incident.
- Set State to Resolved and clicked Update.

Service Catalog > Peripherals
> Wireless keyboard and mouse

his set consists of a wireless keyboard and mouse with bluetooth ompatibility

* Requested for

Daniel Zill

* Business justification

Required for daily tasks. The existing one is faulty and out of warranty, impacting regular tasks.

Conclusion

Doing these exercises proves that I can jump into a ServiceNow environment and start managing tickets on day one without needing basic training on the tool. I know how to log phone calls, handle quick password fixes, write clear troubleshooting notes before passing a hardware problem to Desktop Support, and link multiple complaints together during a major outage. Most importantly, I understand when a user is asking to fix something that broke versus ordering something new, ensuring work gets routed to the right team the first time.
